

Myths vs. Facts

Myth: Women will be denied care for miscarriages and ectopic pregnancies.

Fact: Planned Parenthood abortionist, Dr. Bhavik Kumar, testified in 2022 before Congress that pro-life laws do not ban care for women suffering from ectopic pregnancies, “To date and to my knowledge, there are no laws that outlaw care for ectopic pregnancies.”¹ The same is true for the provision of care for miscarriage.”

Myth: Abortion is a Constitutional Right.

Fact: ³The Constitution specifically defines a number of rights enjoyed by the people, including the right to free speech, right to bear arms, and right to practice religion, among others. These are enumerated—explicitly stated—rights. The word “abortion,” on the other hand, never appears in the Constitution. Unenumerated rights are legal rights inferred from other rights that are implied by existing laws. For example, the Constitution does not explicitly mention a right to privacy; however, the Court has determined a right to privacy exists under the Fourteenth Amendment’s concept of personal liberty.²

Myth: Unborn babies don’t have heartbeats.

Fact: A baby’s heartbeat in the womb can be detected at 6 weeks or 21-27 days into the pregnancy.⁴

Legal Status of Abortion

Since *Roe v. Wade* has been nullified, each state will establish legislation concerning the availability of abortion for their citizens. The status of legislation falls into one of 4 categories explained online at **LifeSavingLaws.com**.

If someone gets an abortion in a state where it is illegal, the doctor will be prosecuted, **not** the woman.

50% of abortions

are done via chemical abortion which requires a woman to take mifepristone and misoprotol, known as the abortion pills. This process can be reversed if intervention is provided before the second pill is taken. The baby can be saved.
